## **EPG Collector (2022)**

1. Inputs: The input is a list of input options. These options are described below: (1) DVB-T: (a) Frequency (optional) - A list of input frequencies. By default, the program will search for a DVB-T signal on all input channels. The program will be automatically set to the next channel as the DVB-T signal is found. (b) Transition (optional) - A list of frequency transitions used by the DVB-T signal. The program can automatically detect a frequency or it can be manually entered. By default, the program will use a frequency transition every 30 seconds. The program will search for the closest to the frequency transition in this time. (2) DVB-S: (a) Frequency (optional) - A list of input frequencies. By default, the program will search for a DVB-S signal on all input channels. The program will be automatically set to the next channel as the DVB-S signal is found. (b) Transition (optional) - A list of frequency transitions used by the DVB-S signal. The program can automatically detect a frequency or it can be manually entered. By default, the program will use a frequency transition every 60 seconds. The program will search for the closest to the frequency transition in this time. (3) DVB-C: (a) Frequency (optional) - A list of input frequencies. By default, the program will search for a DVB-C signal on all input channels. The program will be automatically set to the next channel as the DVB-C signal is found. (b) Transition (optional) - A list of frequency transitions used by the DVB-C signal. The program can automatically detect a frequency or it can be manually entered. By default, the program will use a frequency transition every 30 seconds. The program will search for the closest to the frequency transition in this time. (4) DVB-D: (a) Frequency (optional) - A list of input frequencies. By default, the program will search for a DVB-D signal on all input channels. The program will be automatically set to the next channel as the DVB-D signal is found. (b) Transition (optional) - A list of frequency transitions used by the DVB-D signal. The program can automatically detect a frequency or it can be manually entered. By default, the program
