Performance-wise, Adobe Photoshop is right up there with the best photo editing software imaginable. With the many new tools in the Creative Cloud, Photoshop is going to be a wide player. Even without the cloud, Photoshop's software is nothing to scoff at. For smaller projects, the new AI tools make the application a breeze to learn. Photoshop is best for working with large images, though. For example, the capture new panels to easily upload 10 images at a time without opening each one individually. As my recent updates to Windows and Windows 8.1 have indicated, Windows 8 does have some problems. For example, my high-speed broadband Internet connection runs at around one gigabyte. It does not. Windows 8 may freeze after I close all the apps on my PC for too long. It does this every time for the past couple of weeks. I suggest those with Windows 8.1 to use Windows 7 instead. I first discovered the cost of using Lightroom professionally when I submitted some images to a call for entries on Behance. I discovered that my hosting plan (which Behance advertised was free) was not free. As my personal website was being promoted on Behance, I offered to include Behance's gallery in my own. I thought I should be able to create a new gallery and the Lightroom catalog, and then import the Behance images. I discovered that Lightroom's database size was about 8 gigabytes. That's a lot for one. I had to shut the Lightroom desktop down so that my iMac would start up again. After it did, I was able to import the files, but the new Lightroom catalog took 14GB of space. I learned then that professionals need to budget their hosting. My artwork needs to generate very little website traffic, but I want to grow the exposure. I'm not a professional and mass-resellers will take advantage of my photos if I have no extra funds. Spending the extra money for hosting months or years in advance and far in excess of what the hosting company advertises will enable you to live as a digital professional for far longer.

"So, the question of whether Flash or Silverlight would be a better option for a client application like this should be easy to answer. (If you don't have a suitable computer, however, you may want to wait.) The Apple tutorial for installing Photoshop on top of new hardware specifically notes that you will need to update its drivers, which is fairly minor and easy. Once done, you should be on your way to using Photoshop to edit your images, from raw files, to JPEG and TIFF, and any image format that the software will open. *Adobe Photoshop Elements for iOS* (Opens in a new window) is available for the iPhone and iPad. The changes you make -- brightness, contrast, shadows/highlights, white balance -- are automatically applied to the raw image. Workflow: Quick Open Images  
Open the filter with the raw image, choose the adjustment. The image ends up in the adjustment layer and the adjustments are made. You can then apply the adjustment to the original image or apply an adjustment to a layer in the original image.
