The 15q11.2q13.3 region contains several genes expressed in the brain and the known disease genes that cause intellectual disability (ID) and schizophrenia. This haplotype has been associated with a number of syndromes that include autism and/or ID. Therefore, the aim of this study was to examine a cohort of patients with a previous diagnosis of unexplained ID/autism, as well as to perform clinical and molecular analysis of subjects with an abnormal phenotype for this region. In the first family studied, an exclusion microdeletion of approximately 24 Mb of the 15q11.2q13.3 region was detected. No pathogenic changes were detected in the two subjects of the second family studied in whom an association with ID/autism was observed, none of them carrying the haplotype. Therefore, patients with an intellectual developmental disorder with or without autism, who lack the 16p11.2 syndrome and in whom no abnormalities at the 15q11.2q13.3 region have been found previously, should be assessed for the region located at 15q13.2q14.3.Der Deutsche CamSoda hat eine neue Zielgruppe gefunden, die sich alles ansehen lässt: Männer.
